

# Code-to-Cloud

Insight DevOps Fellowship, New York

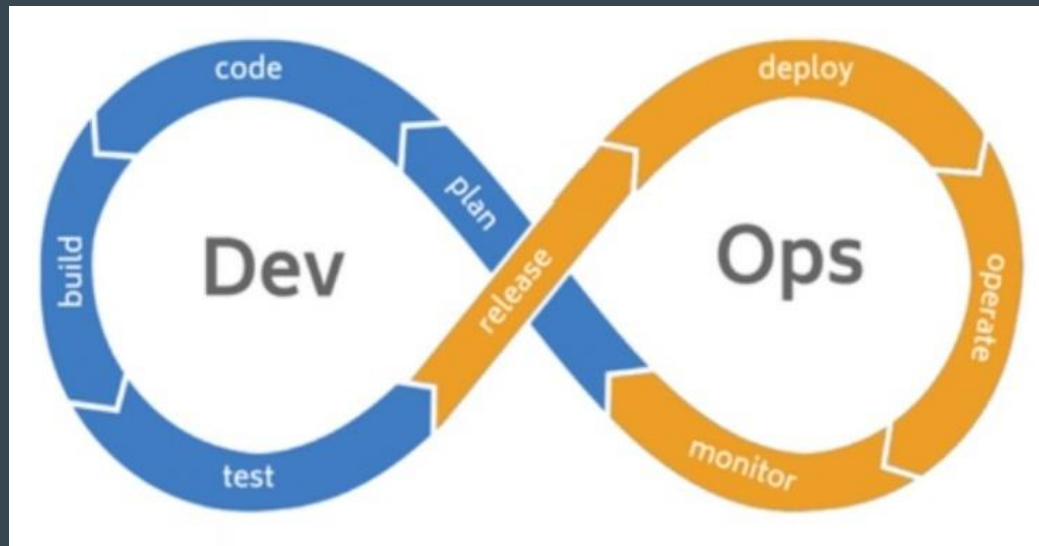

Wen Gong

# Business Problem

- Streamline processes: test > build > deploy  
=> Enable developers to focus on features + faster time-to-market speed
- Migrate business to cloud  
=> Gain business values: productivity and cost savings.

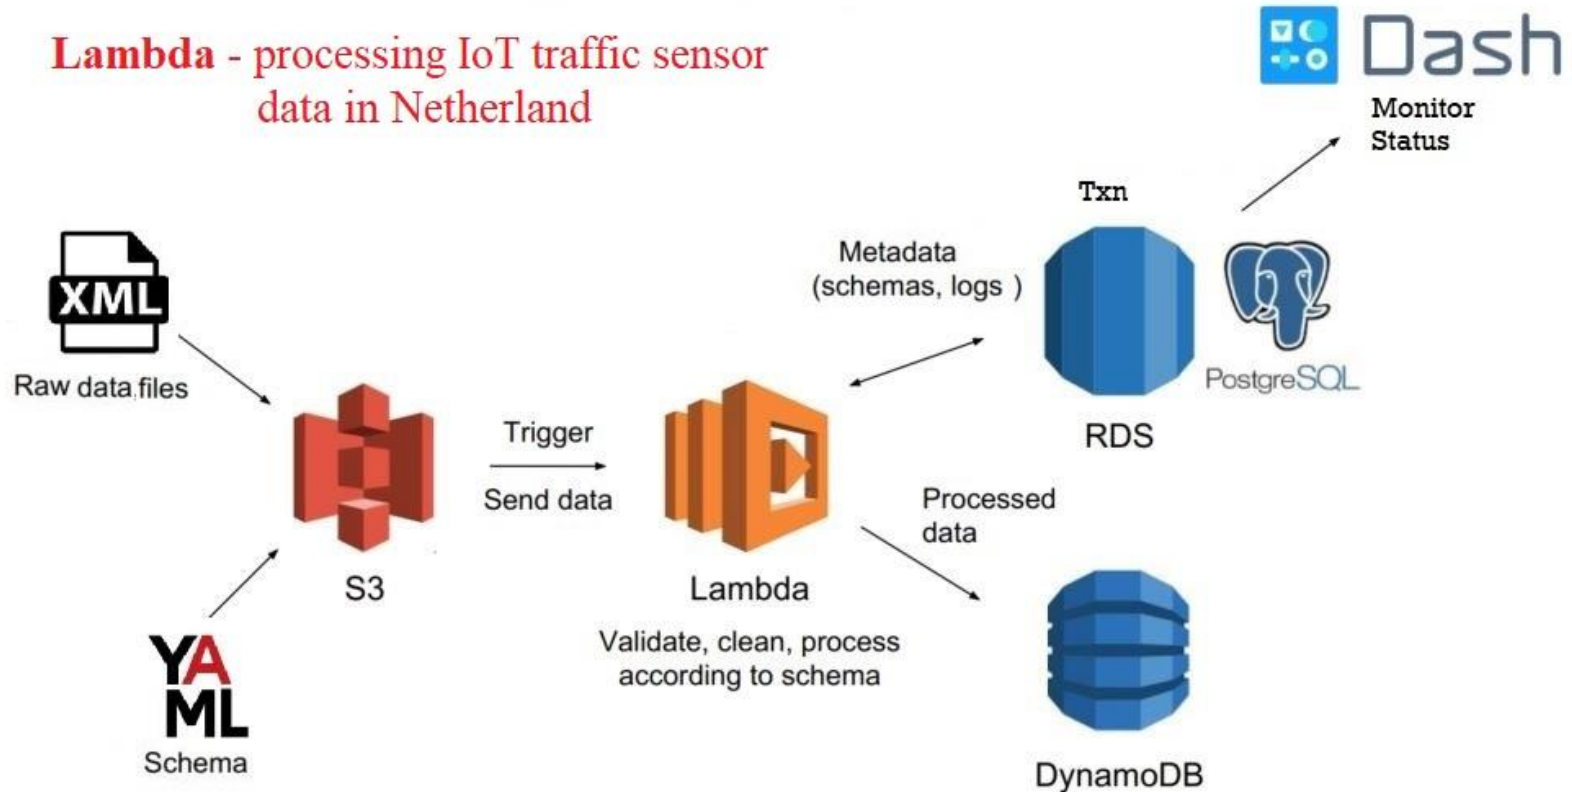

# Motivation

- Apps
- Processes  
(Jenkinsfiles)
- Infrastructures  
(Dockerfiles, ...)

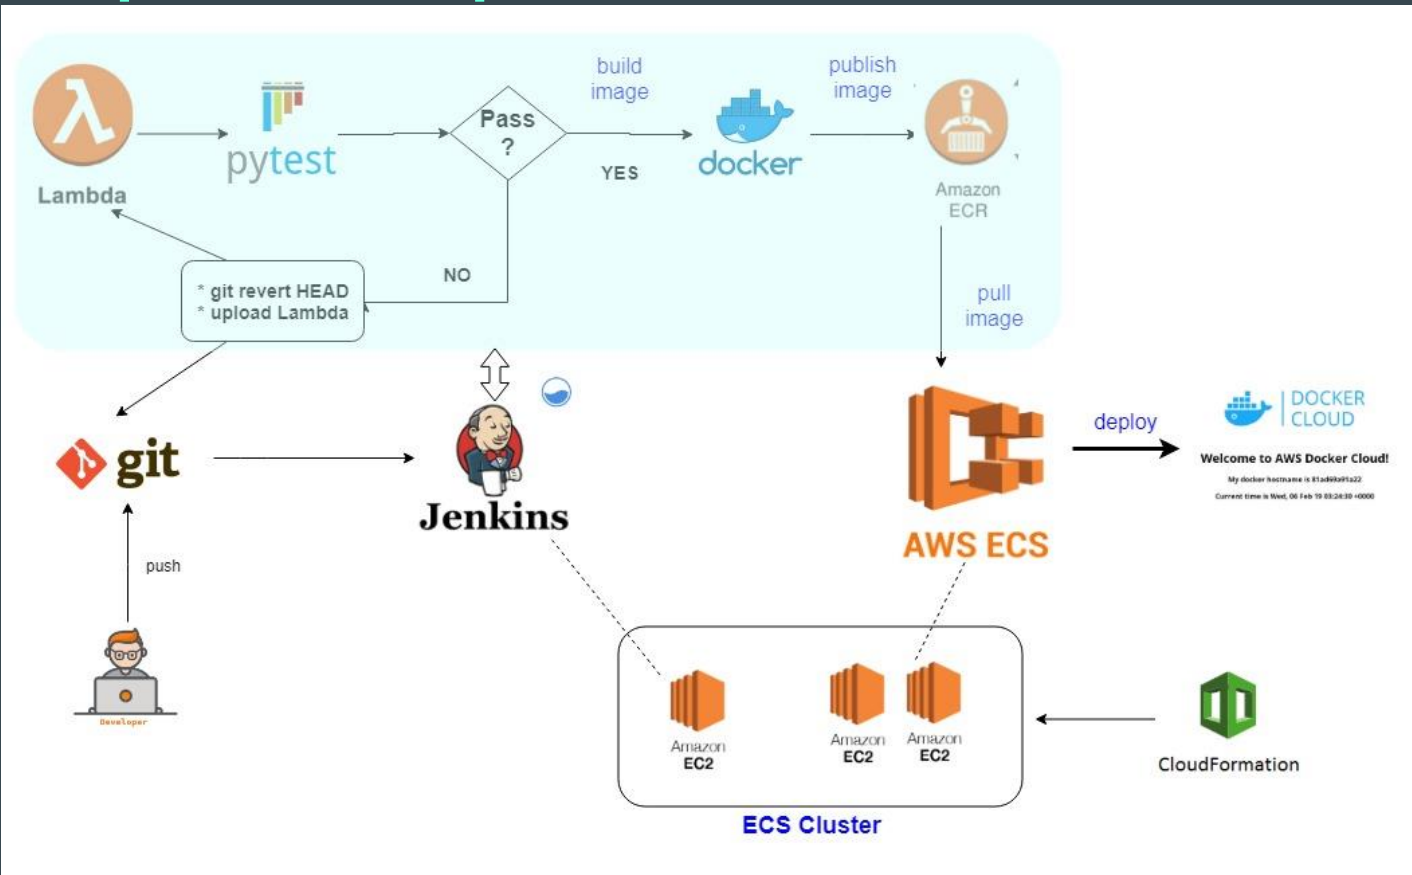

# Data Engineering Pipeline

**Lambda** - processing IoT traffic sensor data in Netherland

# DevOps CI/CD Pipeline

# Challenges

- Write pytest on Data Engineer's pipeline  
=> add new table and write new code for schema changes
- Rollback Lambda when build test failed  
=> Write custom python code
- Jenkins plugin (Docker build and publish) not working  
=> Write bash code as workaround

# Jenkins: Build Config

# Jenkins: Pipeline/Jenkinsfile

```
1 pipeline {
2   agent any
3   stages {
4     stage('Build') {
5       steps {
6         sh 'echo "upload Lambda function"'
7         sh '''
8           ./upload-lambda-xml.sh
9         '''
10      }
11    }
12    stage('Test') {
13      steps {
14        sh 'echo "run integration test"'
15        sh '''
16          source ~/.aws/env_var
17          echo ${AWS_S3_BUCKET}
18          echo ${AWS_PG_DB_HOST}
19          echo "activate py3"
20          source ~/py36/bin/activate
21          which python3
22          which pytest
23          echo "run pytest"
24          cd src/lambda_xml
25          pytest -q test_lambda_function_xml.py
26        '''
27      }
28    }
29  }
```
